

SYSTEM TYPES

CLIPRAIL

Komfort flexible underfloor plastic pipe is laid out to the required system configuration and held in position by rails, secured to the floor insulation with fixing pins. The pipework is fitted to the manifold and pressure tested, using water or air, to ensure that there are no leaks, prior to the floor screed being laid.

MESH (not shown)

As an alternative to clip rail system, pipes can be fixed, using plastic ties, to a reinforcing steel mesh.
